A dedicated server is recommended for any web project requiring sole use of the resources a server can provide or which will also be used as game servers. With the dedicated servers at webtropyia.com you will receive your own dedicated server. And you also benefit from the latest hardware on the market. You get a dedicated root server with the best performance at an affordable price because we use the particularly powerful XEON CPUs from Intel, combined with DDR4 RAM and SSD hard drives. Your dedicated server is setup and prepared especially for you by the technicians at webtropyia.com. Webtropyia.com uses only brand name hardware in our dedicated servers. Even the smallest dedicated server oozes performance. You get an incredibly well-equipped dedicated server at an affordable price thanks to the especially powerful CPUs and large volume of RAM. If you need even more power and, above all, want to work faster, you can choose a dedicated server with SSD hard drives which provide fast data access. In addition, you always have the option to supplement your server with additional hard drives. Dedicated servers from webtropyia.com enable virtualization. You get optimum performance for virtualization of servers with up to 16 vCores and 64 GB DDR4 RAM. With this performance, you can operate multiple virtual machines on one physical server. For virtualization, webtropyia.com provides the virtualization software, vSphere from VMware, as well as Proxmox and Hyper-V. Please note that you must conduct for the setup configuration of the virtualization software and that we do not provide that service. With your new dedicated root server from webtropyia.com, you will receive outstanding brand name hardware from leading international manufacturers. All servers are developed in Germany and custom-made for webtropyia.com. This enables webtropyia.com to offer high-performance servers on economical terms. The hardware is procured from Intel, Samsung, Kingston and Supermicro, among others. Furthermore, webtropyia.com always uses the latest hardware for their customers. With our Power and Ultimate servers, remote management is included free via KVM over IP. For the dedicated servers with KVM over IP (IPMI), you receive an extensive tool for the remote management of your servers free of charge. Webtropyia.com was one of the first German providers to make this service available from the beginning. Previously, such services were reserved for individual server farms or custom server hardware. Typical applications for dedicated servers are resource-intensive web projects, websites with high volumes of database queries, dynamic websites and streaming and download portals. Dedicated servers are also popular for use as game servers because the games predominantly require servers

with high-performance CPUs and RAM. The dedicated servers are also ideally suited for hosting Minecraft game servers.
